

## Success Story – Cardboard handling – Mexico “Continuous Production between nails and wooden splinters”

Equipment: **Truck Mounted Forklift**  
Tire: **27 x 10 -12 (14) Solideal MPT**  
Product: **RePneu II**  
End User: **Smurfit**

In Mexico, the company Smurfit has achieved the best client service levels for cardboard recycling, thanks to the **TyrFil®**. *CAMSO Mexico* have had the vision to offer the solution to such important transnational company.

The three tires used by the transportable Forklifts (Moffet), size: 27 x 10 -12 (14PR) Solideal MPT, filed approximately to 110 lbs. @ 135 psi. Such equipment is used for the daily recollection of cardboard produced at the distribution centers of one of the world’s largest self-service warehouses and is then sent to Smurfit’s recycling plant located at Ecatepec, State of Mexico.

Mr. Jorge Fernández Santana, Smurfit’s Maintenance general manager asserts that when only air was used,

they had a stoppage everyday related to a tire puncture and therefore had to wait for a new tire to be sent from the service center, which occasionally took up to ten days to arrive, time in which the unit was lazy. – “Per week we had 3 stoppages due to punctures, which made customers uncertain because it faced the risk, and even gave the impression, that we would not be able to achieve the daily recollection, therefore we had to incur in additional transportation and personnel expenses. The life cycle expectation for such tires was average, but as of the use of the Flatproofing, we use our tires until the strings show, which using solely air, would be impossible”.-

Tires with Flatproofing have been in use for six months and have a 60% remnant on the tire tread, therefore an additional 12 month operation forecast, excellent for us.

**Another great example of the cost savings of TyrFil®!**
