

Success Story – Housing Development - Mexico

Equipment: **Backhoe - CAT**
Tire: **11L-16 Solideal Backhoe**
Product: **RePneu II – 186 Lbs – @60PSI**
End User: **Constructora Marfil**

To uphold backhoes working most of the operation time without any tire related stoppage, the company Marfil S.A. de C.V., based in the city of Monterrey, Nuevo Leon, Mexico, as of 7 years ago, decided to cease the solution granted by the ARNCO Flatproofing. Maintenance representative, Mr. Jaime Cruz, asserts that equipment availability is a very important factor to attain productivity and cost-efficiency established by the directorate and therefore the investment on the ARNCO flatproofing is paid immediately.

This company fills every CASE 850 backhoe front wheel tires 11L-16 using approximately 180 lbs. filling @ 50psi.

Backhoe's operator, Jesús Cardona, manifests lots of confidence while operating with flatproofing, because when entering rubble or material pool, he is not afraid to flatten or deflate a tire due to a deep cut, besides he does not waste time in cleaning the working area and provides a better service to its internal clients and most importantly, he does not have to wait for his equipment after an incident which might happen at the end of his shift, which used to be very common in the past.

Another great example of the cost savings of TyrFil®!
